POD PIN SYSTEM

CRAB CLIP SYSTEM

“The curved bar supports makes the steel drop straight in every time”
– Hawke’s Bay Builder

The features of our **PODLOCK SPACER**

With two years of solid market research this spacer is designed for functionality, and with ease of use in mind. One of the huge advantages is the pod pin system designed to pin the pods down, preventing them from moving or blowing away. Once the pods and spacers are in position, placing your bar in the trench is also made easier with the wide mouth bar support. You can drop your bar into the trench, knowing that it will self-center to the correct position.

Frustrated with leftover spacers going to waste?

Never again with our Crab Clip system! You can clip the spacers together when not in use, convenient when moving to the next job.
